

Ejercicios de PowerShell: validar credenciales de AD y ejecutar un programa si son correctos

Ver información sobre validación de credenciales
<https://www.jesusninoc.com/01/04/validar-credenciales-en-el-directorio-activo-active-directory/>

```
function Login
{
    param
    (
        [Parameter(Mandatory)]
        [SecureString]
        $SafeInput
    )

    $PlainText =
[Management.Automation.PSCredential]::new('x',$SafeInput).GetNetworkCredential().Password

    "User entered "

    Add-Type -AssemblyName
System.DirectoryServices.AccountManagement
    $account = New-Object
System.DirectoryServices.AccountManagement.PrincipalContext([D
irectoryServices.AccountManagement.ContextType]::Domain,
$env:userdomain)

    if($account.ValidateCredentials('perry', $PlainText)){
        Start-Process notepad
    }
    else
    {
        "No puedes ejecutar Notepad"
```

```
}  
}
```
