

Nikto

Nikto is an Open Source ([GPL](#)) web server scanner which performs comprehensive tests against web servers for multiple items, including over 6700 potentially dangerous files/programs, checks for outdated versions of over 1250 servers, and version specific problems on over 270 servers. It also checks for server configuration items such as the presence of multiple index files, HTTP server options, and will attempt to identify installed web servers and software. Scan items and plugins are frequently updated and can be automatically updated.

A screenshot of a terminal window with a menu bar (File, Edit, View, Scrollback, Bookmarks, Settings, Help). The terminal shows the command 'nikto -h www.example.com' being executed. The output displays scan details: Target IP (192.0.32.10), Target Hostname (www.example.com), Target Port (80), and Start Time (2010-05-09 0:48:00). It identifies the server as Apache/2.2.3 (CentOS) and lists allowed HTTP methods. A warning message (OSVDB-877) is shown regarding the 'TRACE' method. Finally, it notes that Apache/2.2.3 appears outdated, suggesting at least Apache/2.2.9, and lists other current versions (1.3.39 and 2.0.61).

```
File Edit View Scrollback Bookmarks Settings Help
cokacola@cokacola:~$ nikto -h www.example.com
- Nikto v2.03/2.04
-----
+ Target IP:      192.0.32.10
+ Target Hostname: www.example.com
+ Target Port:    80
+ Start Time:     2010-05-09 0:48:00
-----
+ Server: Apache/2.2.3 (CentOS)
- Allowed HTTP Methods: GET, HEAD, POST, OPTIONS, TRACE
+ OSVDB-877: HTTP method ('Allow' Header): 'TRACE' is typically only used for debugging and should be disabled. This message does not mean it is vulnerable to XST.
+ Apache/2.2.3 appears to be outdated (current is at least Apache/2.2.9). Apache 1.3.39 and 2.0.61 are also current.
```
