

MobaXterm

MobaXterm is your **ultimate toolbox for remote computing**. In a single Windows application, it provides loads of functions that are tailored for programmers, webmasters, IT administrators and pretty much all users who need to handle their remote jobs in a more simple fashion.

MobaXterm provides all the important **remote network tools** (SSH, X11, RDP, VNC, FTP, MOSH, ...) and **Unix commands** (bash, ls, cat, sed, grep, awk, rsync, ...) to Windows desktop, in a **single portable exe file** which works out of the box. [More info on supported network protocols](#)

There are many advantages of having an **All-In-One network application** for your remote tasks, e.g. when you use **SSH** to connect to a remote server, a graphical **SFTP browser** will automatically pop up in order to directly edit your remote files. Your remote applications will also display seamlessly on your Windows desktop using the embedded **X server**. [See demo](#)

You can download and use MobaXterm Home Edition for free. If you want to use it inside your company, you should consider subscribing to MobaXterm Professional Edition: this will give you access to much more features, professional support and «Customizer» software. [Features comparison](#)

When developing MobaXterm, we focused on a simple aim: proposing an **intuitive user interface** in order for you to **efficiently access remote servers** through different networks or systems. [Screenshots](#)

MobaXterm is being actively developed and frequently updated by [Mobatek](#).
