

Listar variables y su contenido en PowerShell

[crayon-6a9d67fe0d478216841882/]

```
lamac — powershell — 80x9
PS /Users/lamac> $prueba = "hola"
PS /Users/lamac> Get-Variable -name pr*
```

Name	Value
prueba	hola

```
PS /Users/lamac>
```

The image shows a PowerShell terminal window with a dark background. The title bar indicates the window is titled 'lamac — powershell — 80x9'. The terminal content shows two commands: '\$prueba = "hola"' and 'Get-Variable -name pr*'. The output of the second command is a table with two columns: 'Name' and 'Value'. The table contains one entry: 'prueba' with the value 'hola'. The prompt 'PS /Users/lamac>' is visible at the bottom of the terminal.
