

Recorrer el primer nivel de enlaces de un sitio web

[crayon-6a9d678ee1bd2716914803/]

The image shows a Visual Studio Code editor window with a PowerShell script in the main editor and its output in the integrated terminal. The script is designed to fetch the first-level links from a website.

```
$url="http://www.jesusninoc.com"
1 $url="http://www.jesusninoc.com"
2 foreach($links in (Invoke-WebRequest $url).Links.href)
3 {
4     $links
5 }
```

The terminal output lists the following URLs:

```
https://www.jesusninoc.com/projects/
https://www.jesusninoc.com/temarios-de-asignaturas/
