

Generar datos de usuarios aleatorios desde PowerShell

[crayon-6a9d6769da2d4999230774/]

The screenshot shows the Windows PowerShell ISE interface. The script editor at the top contains two lines of code:

```
1 $usuarios = Invoke-WebRequest -Uri https://randomuser.me/api/ | ConvertFrom-Json
2 $usuarios.results.name
```

The console window below shows the execution of this script twice. The first execution returns the name 'Mr Isaac Martin', and the second execution returns 'Miss Anna Coleman'. The output is formatted with a header 'title first last' and a separator line '-----'.

```
PS C:\Users\juan> $usuarios = Invoke-WebRequest -Uri https://randomuser.me/api/ | ConvertFrom-Json
$usuarios.results.name

title first last
-----
Mr      Isaac Martin

PS C:\Users\juan> $usuarios = Invoke-WebRequest -Uri https://randomuser.me/api/ | ConvertFrom-Json
$usuarios.results.name

title first last
-----
Miss    Anna  Coleman

PS C:\Users\juan>
```

The status bar at the bottom indicates 'Completado' (Completed) and shows the current line and column numbers as 'Lín. 2 Col. 23'.
