

Usar RSS Feeds

The screenshot displays the 'usarfeeds (Workflow)' window in Automator. The interface includes a top toolbar with 'Record', 'Step', 'Stop', and 'Run' buttons. On the left, a sidebar shows a 'Library' of actions categorized by type (e.g., Internet, Mail, Music). The main workspace contains two actions:

- Get Specified URLs:** This action has an 'Address' field containing 'http://www.jesusninoc.com/feed'. It includes 'Add' and 'Remove' buttons and an 'Open URL' button.
- Get Link URLs from Articles:** This action is selected and shows its 'Results' tab. It has a checkbox 'Only return URLs in the same domain as the original webpage' which is checked. Below, it displays a list of 10 items, each a URL from 'www.jesusninoc.com'.

At the bottom left, a detailed view for the 'Get Image URLs from Articles' action is shown, including its input, result, and related actions.
