

Curl en PowerShell

[crayon-6a9d787218b14146526192/]

The screenshot shows the Windows PowerShell ISE interface. The menu bar includes Archivo, Editar, Ver, Herramientas, Depurar, Complementos, and Ayuda. The toolbar contains icons for file operations and execution. Two tabs are open: 'Sin título1.ps1*' and 'Sin título2.ps1*'. The script in the active tab contains three lines: `$web = curl "https://www.jesusninoc.com"`, `$web`, and `Get-Alias curl | select *`. The output of the last command is displayed in the console, showing the properties of the 'curl' alias. The console background is dark blue with white text. The status bar at the bottom indicates 'Completado', 'Lín. 2 Col. 5', and a zoom level of '120 %'.

```
1 $web = curl "https://www.jesusninoc.com"
2 $web
3 Get-Alias curl | select *
```
