

Ver la intensidad de otras redes Wi-Fi cercanas en macOS desde el terminal

[crayon-6a9d4fa08e5ef256477721/]

A terminal window titled 'jesusn --zsh -- 142x36' showing the output of the command `airport -s`. The output is a table of nearby Wi-Fi networks. The first column is the network name (SSID), the second is the BSSID, and the third is the RSSI (signal strength). The table lists several networks, including 'MOVIS', 'MOVISTAR_PLUS', and 'MOVISTAR'. The signal strength for 'MOVIS' is -89, for 'MOVISTAR_PLUS' is -72, and for 'MOVISTAR' is -51. The terminal window has a dark background and a light-colored text.

SSID	BSSID	RSSI
MOVIS		-89
MOVIS		-88
MOVIS		-88
MOVIS		-86
MOVIS		-86
MOVIS		-85
MOVIS		-85
MOVIS		-85
MOVISTAR_PLUS		-72
MOVISTAR		-51
