

Crear una Windows Presentation Foundation (WPF) ventana en PowerShell de forma simple y sencilla

[crayon-6a9d6034e23b0334254887/]

The screenshot shows the Windows PowerShell ISE interface. The script in the editor is as follows:

```
1 ($window = [System.Windows.Window] @{  
2     Title = 'Mi formulario'  
3     Height = 200  
4     Width = 400  
5     WindowStartupLocation = [System.Windows.WindowStartupLocation]::CenterScreen  
6     Background = [System.Windows.Media.Brushes]::Red  
7 }) ShowDialog()
```

Below the script, a small window titled "Mi formulario" is displayed, which is a solid red rectangle. The console at the bottom shows the execution of the script:

```
Height = 200  
Width = 400  
WindowStartupLocation = [System.Windows.WindowStartupLocation]::CenterScreen  
Background = [System.Windows.Media.Brushes]::Red  
}).ShowDialog()
```

The status bar at the bottom indicates: "Se está ejecutando el script o la selección. Presione Ctrl+Inter para detenerlo. Presione Ctrl+B para interrumpir el depurador." and shows the cursor at "Lin, 188 Col, 1" with a zoom level of "185 %".
