

Convertir el fichero Excel con la lista de radares de España en un fichero JSON

[crayon-6a9d4fa1d5b1e843790156/]

The screenshot shows a Windows PowerShell ISE window titled "Administrador: Windows PowerShell ISE". The main window displays a table of radar data for Madrid, filtered by "where PROVINCIA -EQ 'Madrid'". The table has two columns: "CARRETERA" and "PK". The data is displayed in a grid view. The bottom of the window shows the PowerShell command used to generate the output: `PS c:\Users\lmac\documents> $radares | where PROVINCIA -EQ "Madrid" | select carretera, pk | Out-GridView`.
