

# Mostrar el volumen diario de varias acciones del IBEX 35 y del Mercado Continuo

[crayon-6a9d5008dd2f6940319943/]

The screenshot shows a Windows PowerShell ISE window with a script that fetches daily trading volumes for various stocks from the Bolsa de Madrid website. The script uses `Invoke-WebRequest` to get HTML data, processes it with `Where-Object`, `Replace`, and `ConvertFrom-Csv` to extract the volume information.

```
1 $acciones = "ES0148396007", "ES011390037", "ES0109067019", "ES0105046009", "ES0105066007", "ES0130960018", "ES0130670112", "ES0118900018"
2
3 foreach($accion in $acciones)
4 {
5     $web = (Invoke-WebRequest ('http://www.bolsamadrid.es/esp/asp/Empresas/FichaValor.aspx?ISIN='+$accion))
6
7     $webhtml = $web.AllElements.where{$_.id -eq "ct100_Contenido_tblPrecios"}.outerhtml
8     $sinhtml = $webhtml.replace(".", "").replace(",", ".").replace("</th>", "</th>").replace("</td>", "</td>") -replace "<.*?>"
9     $htmlsin = $sinhtml.trim()
10    $sinespa = $htmlsin.replace(" ", "")
11    $concsv = $sinespa | ConvertFrom-Csv
12    $web.ParsedHtml.title
13    $concsv.Volumen
14 }
```

The output of the script is displayed in the console, showing the volume for each stock:

```
