

Getting list of dll files and modules loaded by process

[crayon-6a9d689a79b79609078796/]

The screenshot shows the Windows PowerShell ISE interface. The script editor at the top contains the following code:

```
1 #Example: notepad
2 #Select
3 get-process notepad | select -expand modules
4 #Or ().
5 (get-process notepad).Modules
```

The console window below shows the execution of the script. The prompt is `PS C:\Windows\System32>`. The commands entered are `#Example: notepad`, `#Select`, `get-process notepad | select -expand modules`, `#Or ().`, and `(get-process notepad).Modules`. The output is a table with three columns: `Size(K)`, `ModuleName`, and `FileName`.
