SpiderFoot 2.9.0

SpiderFoot 2.9.0 is now out, totaling almost 60 data collection/analysis
modules for your **reconnaissance**, **footprinting** and **OSINT** needs.

Here's what's new since 2.7.0 was announced here…

- *9* new modules:
  -Base64 string finder
  -Binary string searches (identifies file meta data)
  -Censys.io data collection (device info)
  -Cymon.io data collection (threat intel)
  -Hunter.io data collection (e-mail addresses)
  -psbdmp.com data collection (password dumps/breaches)
  -ThreatCrowd data collection (threat intel)
  -Squatted domain identification
  -Wikileaks.org data searches
- Search by e-mail addresses in addition to IPs, subnets, domains
  and hosts
- Massive reduction in false positives of junk files and social
  media accounts
- German, French and Spanish dictionaries added for better name/string finding
- Bunch of bug fixes and minor enhancements
- User manual updated: http://www.spiderfoot.net/documentation/

This compliments the existing list of modules performing searches of
SHODAN, VirusTotal, Google, Web crawling, DNS and a ton of other data
collections (full list here: http://www.spiderfoot.net/documentation/#module-list)
