

Faraday v2.4: Collaborative Penetration Test and Vulnerability Management Platform

Faraday Client is the software which will allow you to work with your favorite security tools and capture their output in an organized manner. It works under a GTK+3 interface with the popular VTE terminal with a custom ZSH shell that respects the user's configuration (yes, that means you get to keep your exact ZSH terminal inside Faraday, even if you use ZPrezto or Oh My ZSH).

Quick install

Download the [latest tarball](#) or clone the [Faraday Git Project](#):
[crayon-6a9dbf4395e3a435841817/]

Plugins

Faraday plays well with others, right now it has more than [50 supported tools](#), among them you will find:
