

Conocer el tamaño, expresado en bytes, de un tipo no administrado mediante la clase Marshal en PowerShell

[crayon-6a9d4f8ecac0a661740327/]

The screenshot shows the Windows PowerShell ISE interface. The editor has four tabs, all titled "Sin título.ps1*(Recuperado)". The first tab is active and contains two lines of PowerShell code:

```
1 [System.Runtime.InteropServices.Marshal]::SizeOf(1)
2 [System.Runtime.InteropServices.Marshal]::SizeOf([Char]'a')
```

The console window at the bottom shows the execution of these commands. The first command returns 4, and the second command returns 1.

```
PS C:\Users\juan> [System.Runtime.InteropServices.Marshal]::SizeOf(1)
4
PS C:\Users\juan> [System.Runtime.InteropServices.Marshal]::SizeOf([Char]'a')
```

The status bar at the bottom right indicates "Lin. 2 Col. 40" and a zoom level of "165 %".
