

Obtener los ensamblados que se han cargado en el contexto de ejecución del dominio de aplicación desde PowerShell

```
[AppDomain]::CurrentDomain.GetAssemblies()
```

The screenshot shows the Windows PowerShell ISE interface. The command `[AppDomain]::CurrentDomain.GetAssemblies()` has been executed, resulting in a table of loaded assemblies. The table has three columns: GAC, Version, and Location. The output lists various .NET Framework assemblies, including `mscorlib.dll`, `System.dll`, `System.Windows.Forms.dll`, `System.Drawing.dll`, `System.Management.Automation.dll`, `System.Core.dll`, `System.Configuration.dll`, `System.Xml.dll`, `System.Resources.dll`, `System.ComponentModel.Composition.dll`, `System.WindowsBase.dll`, `PresentationFramework.dll`, `PresentationCore.dll`, `System.Xaml.dll`, `UIAutomationProvider.dll`, `System.Runtime.Serialization.dll`, `Accessibility.dll`, `System.Management.dll`, and `System.DirectoryServices.dll`.
