

Acceder a clases .Net desde PowerShell utilizando aceleradores

Los aceleradores de tipo son una gran forma en PowerShell para acceder a clases .Net sin tener que escribir sus nombres completo.

[crayon-6a9d98b89b386225779097/]

```
Windows PowerShell ISE
Archivo Editar Ver Herramientas Depurar Complementos Ayuda
Sin título:ps1* X
1 [psobject].Assembly.GetType("System.Management.Automation.TypeAccelerators")::get

PS C:\Users\Juan> [psobject].Assembly.GetType("System.Management.Automation.TypeAccelerators")::get
```

Key	Value
Alias	System.Management.Automation.AliasAttribute
AllowEmptyCollection	System.Management.Automation.AllowEmptyCollectionAttribute
AllowEmptyString	System.Management.Automation.AllowEmptyStringAttribute
AllowNull	System.Management.Automation.AllowNullAttribute
ArgumentCompleter	System.Management.Automation.ArgumentCompleterAttribute
array	System.Array
bool	System.Boolean
byte	System.Byte
char	System.Char
CmdletBinding	System.Management.Automation.CmdletBindingAttribute
datetime	System.DateTime
decimal	System.Decimal
double	System.Double
DscResource	System.Management.Automation.DscResourceAttribute
float	System.Single
single	System.Single
guid	System.Guid
hashtable	System.Collections.Hashtable
int	System.Int32
int32	System.Int32
int16	System.Int16
long	System.Int64
int64	System.Int64
cimInstance	Microsoft.Management.Infrastructure.CimInstance
cimClass	Microsoft.Management.Infrastructure.CimClass
cimType	Microsoft.Management.Infrastructure.CimType
cimConverter	Microsoft.Management.Infrastructure.CimConverter
IPEndpoint	System.Net.IPEndpoint
NullString	System.Management.Automation.Language.NullString
OutputType	System.Management.Automation.OutputTypeAttribute

Ejemplo de utilización de acelerador para mostrar la fecha actual
