

Process Explorer v16.04

Ever wondered which program has a particular file or directory open? Now you can find out. *Process Explorer* shows you information about which handles and DLLs processes have opened or loaded.

The *Process Explorer* display consists of two sub-windows. The top window always shows a list of the currently active processes, including the names of their owning accounts, whereas the information displayed in the bottom window depends on the mode that *Process Explorer* is in: if it is in handle mode you'll see the handles that the process selected in the top window has opened; if *Process Explorer* is in DLL mode you'll see the DLLs and memory-mapped files that the process has loaded. *Process Explorer* also has a powerful search capability that will quickly show you which processes have particular handles opened or DLLs loaded.

The unique capabilities of *Process Explorer* make it useful for tracking down DLL-version problems or handle leaks, and provide insight into the way Windows and applications work.
