

Changing the Windows PowerShell script execution policy

The Set-ExecutionPolicy cmdlet enables you to determine which Windows PowerShell scripts (if any) will be allowed to run on your computer. Windows PowerShell has four different execution policies:

- Restricted – No scripts can be run. Windows PowerShell can be used only in interactive mode.
- AllSigned – Only scripts signed by a trusted publisher can be run.
- RemoteSigned – Downloaded scripts must be signed by a trusted publisher before they can be run.
- Unrestricted – No restrictions; all Windows PowerShell scripts can be run.

To assign a particular policy simply call Set-ExecutionPolicy followed by the appropriate policy name. For example, this command sets the execution policy to RemoteSigned:

```
[crayon-6a9d82837f44a582992437/]
```
