

Detectar con PowerShell si un formulario de contacto de WordPress tiene campos obligatorios

[crayon-6a9d678c989aa238996389/]

The image displays a PowerShell ISE window on the left and a web browser on the right. The PowerShell window shows a script that fetches the HTML of a contact form from <https://www.jesusninoc.com/contact/> and extracts the 'as-required' attribute for each input field. The script output shows the HTML structure of the form, including fields for Name, Email, Subject, and Message, all marked as required.

```
PS C:\Users\juan> $resultado=((Invoke-WebRequest 'https://www.jesusninoc.com/contact/').AllElements).where{$_.tagName -eq "form"}
PS C:\Users\juan> $resultado.outerHTML | Select-String "as-required"

<FORM class=wpacf7-form method=post action=/contact/#wpacf7-f34-p622-01 novalidate=novalidate
jQuery112403258442265148916="5"><DIV style=DISPLAY: none><INPUT type=hidden value=34 name=wpacf7> <INPUT

<DIV class=wpacf7-response-output wpacf7-display-none></DIV></FORM>

PS C:\Users\juan> $resultado.outerHTML -split "`n" | Select-String "as-required"

<P>Your Name (required)<BR><SPAN class=wpacf7-form-control-wrap your-name><INPUT aria-required=true
class=wpacf7-form-control wpacf7-text wpacf7-validates-as-required aria-invalid=false size=40
name=your-name></SPAN></P>
<P>Your Email (required)<BR><SPAN class=wpacf7-form-control-wrap your-email><INPUT aria-required=true
class=wpacf7-form-control wpacf7-text wpacf7-email wpacf7-validates-as-required wpacf7-validates-as-email
aria-invalid=false size=40 name=your-email></SPAN></P>
<P>Your Message (required)<BR><SPAN class=wpacf7-form-control-wrap your-message><TEXTAREA aria-required=true
class=wpacf7-form-control wpacf7-textarea wpacf7-validates-as-required aria-invalid=false rows=10 cols=40
name=your-message></TEXTAREA></SPAN></P>
```

The web browser shows the contact form with the following fields:

- Your Name (required)
- Your Email (required)
- Subject
- Your Message (required)

The form includes a "Send" button at the bottom.
