

Ejercicios de PowerShell: listar las empresas del IBEX 35

[crayon-6a9d8da5c5639387968820/]

The screenshot shows a Windows PowerShell ISE window. The left pane displays the output of a PowerShell command, listing the names of the 35 companies in the IBEX 35 index. The right pane shows a PowerShell script that uses the `Invoke-WebRequest` cmdlet to fetch the list of companies from the IBEX website. The status bar at the bottom indicates that the command has been completed.

```
PS C:\Users\Juan> (((Invoke-WebRequest 'http://www.bolsamadrid.es/esp/aspx/Mercados/Precios.aspx?indice=ESI100000000').AllElements).where{
$_.Class -eq "Diff1Bj" -or $_.Class -eq "Diff1Sb" -or $_.Class -eq "Diff1Ig"}).innerText
