

Crear funciones permanentes en Powershell

[crayon-6a9d5fdc7ca2f379274031/]

The screenshot shows the Windows PowerShell ISE interface. The top pane displays a PowerShell script with a function definition: `function prueba{"hola"}`. The bottom pane shows the execution of the command `new-item -path $profile -itemtype file -force`, which creates a new profile file at `C:\Users\juan\Documents\WindowsPowerShell`. The output shows the file's mode, last write time, length, and name.

```
Sin titulo1.ps1* Microsoft.PowerShellISE_profile.ps1* X
1 function prueba{"hola"}

PS C:\Users\juan> new-item -path $profile -itemtype file -force

Directorio: C:\Users\juan\Documents\WindowsPowerShell

Mode                LastWriteTime         Length Name
----                -
-a-----         24/11/2021   21:54             0 Microsoft.PowerShellISE_profile.ps1

PS C:\Users\juan> powershell_ise $profile
PS C:\Users\juan>
```
