

Ejercicios de PowerShell: realizar una función que muestre información sobre los hilos de un proceso

```
function hilos($name){  
    $processHandle = (Get-Process -Name $name).id  
    $Threads = Get-WmiObject -Class Win32_Thread |  
    Where-Object { $_.ProcessHandle -eq $processHandle }  
    "The $name process has $($threads.count) threads"  
    $threads | Format-Table -Property priority, thread*,  
User*Time, kernel*Time  
}
```

hilos notepad
