

Recorrer el segundo nivel de un sitio web y obtener todos los enlaces del sitio

Importante: es posible que los enlaces del sitio sean rutas relativa, si es así hay que añadir el nombre del dominio al recorrido del segundo nivel.

[crayon-6a9d60bd2fba0417186653/]

The screenshot shows the Windows PowerShell ISE interface. The script in the editor is as follows:

```
1 $url="http://www.jesusnino.com"
2 foreach($links in (Invoke-WebRequest $url).Links.href){foreach($links2 in (Invoke-WebRequest $links).Links.href){$links2}}
3
```

The output in the console shows a list of URLs from the website, including various blog posts and site navigation links:
