

Win32 Classes

Win32 classes, such as [Win32_NetworkAdapter](#) or [Win32_Process](#), monitor and manage system hardware and features. Generally, these classes are located in the root\cimv2 WMI namespace. The following table lists the Win32 class categories.

Classes	Description
Computer System Hardware Classes	Hardware-related objects.
Installed Applications Classes	Software-related objects.
Operating System Classes	Operating system related objects.
Performance Counter Classes	Raw and calculated performance data from performance counters.
Security Descriptor Helper Class	Class that provides methods to convert security descriptors between different formats.
WMI Service Management Classes	Management for WMI.
