

Uso de SimpleDateFormat en Kotlin

[crayon-6a9d5ff962758952379011/]

The screenshot shows the Kotlin Playground interface. At the top, there's a header with the Kotlin logo and navigation links: Solutions, Docs, Community, Teach, and Play. Below the header, there's a toolbar with a version selector (1.9.21), a JVM selector, a text input field for program arguments, and buttons for Copy link, Share code, and Run. The main area contains the following Kotlin code:

```
import java.text.SimpleDateFormat
import java.util.*

fun main() {
    val currentDate = Date()

    // Formatear la fecha actual a un formato personalizado
    val pattern = "dd/MM/yyyy HH:mm:ss"
    val simpleDateFormat = SimpleDateFormat(pattern, Locale.getDefault())
    val formattedDate = simpleDateFormat.format(currentDate)

    println("Fecha formateada: $formattedDate")
}
```

At the bottom, the output of the code is displayed: "Fecha formateada: 18/12/2023 13:21:14". There are also help and close buttons in the bottom right corner.
