

Iteración y operación sobre una lista en Kotlin

[crayon-6a9d60808ab24159806316/]

The screenshot shows the Kotlin Playground interface. At the top, there's a header with the Kotlin logo and navigation links: Solutions, Docs, Community, Teach, Play, and a search icon. Below the header, there's a toolbar with the Kotlin version (1.9.21), the target (JVM), a text input for program arguments, and buttons for Copy link, Share code, and Run. The main area contains the following Kotlin code:

```
fun main() {  
    val numbers = listOf(1, 2, 3, 4, 5)  
  
    // Iterar sobre la lista usando forEach  
    numbers.forEach { element ->  
        println("Elemento: $element")  
    }  
  
    // Realizar alguna operación después de la inspección  
    val doubledNumbers = numbers.map { it * 2 }  
    println("Números duplicados: $doubledNumbers")  
}
```

At the bottom, the output of the program is displayed:

```
Elemento: 1  
Elemento: 2  
Elemento: 3  
Elemento: 4  
Elemento: 5  
Números duplicados: [2, 4, 6, 8, 10]
```
